

"Development platforms accelerate change by centralizing expertise and decentralizing innovation"
/thoughtworks

Bringing a long overdue and new approach to **ETF & DELTA ONE** trading system development.

Despite the simplicity with which the ETF wrapper gives investors exposure to an unlimited range of assets, the underlying businesses that bring these products to market are anything but simple. This is due in part to the unlimited combination of underliers that can comprise an ETF.

The fact that *pricing*, *trading*, *market making*, *issuing* and *settling* a particular asset class can require different technology systems means that day-to-day operations for ETF businesses can be manual and complex.

This diversity has meant that the ETF infrastructure lags behind other products, a trend that Velox is reversing with its **vCore** development platform.

The **vCore** platform combines proprietary development acceleration techniques, modern infrastructure (web & cloud) with 25+ years of experience at top-tier IB's building basket and electronic trading businesses.

"The execution risk of building software has held us back for too long, Velox has the tools to materially de-risk and shorten the innovation cycle"

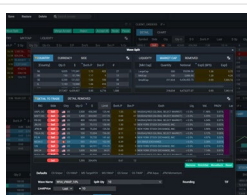

John Neary, Former Head of Equities at Morgan Stanley

"The founders are unique in bringing decades of experience building ETF and Delta One systems"

Stefan Kaba-Ferreiro, Former Managing Partner at GHCO

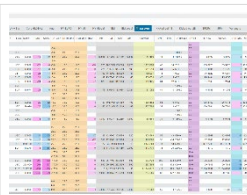

ETF systems built with **vCore**.

ULTUMUS and Velox partner to provide a full-service ETF product and platform.

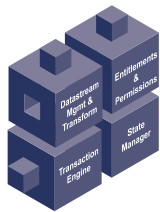

Most recently with the launch of Cosmos, the ETF primary market tool, the last 5 years have seen the ULTUMUS and Velox partnership bring to market a broad set of ETF and Index products and tools.

The product suite combines off-the-shelf solutions to common ETF and Index data and workflow problems along with development tools and services for client specific features and integrations.

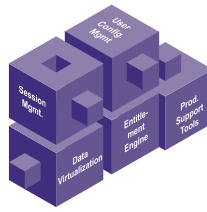

Acceleration without limitation

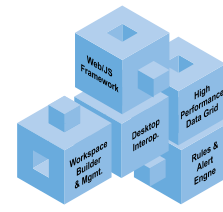

vCore provides solutions to the tough technical challenges that occur often in Capital Markets systems in software building blocks (aka abstractions). These are made available to the developer in their favorite IDE and within a development framework that simplifies the process of modifying and combining to solve the business problem at hand.

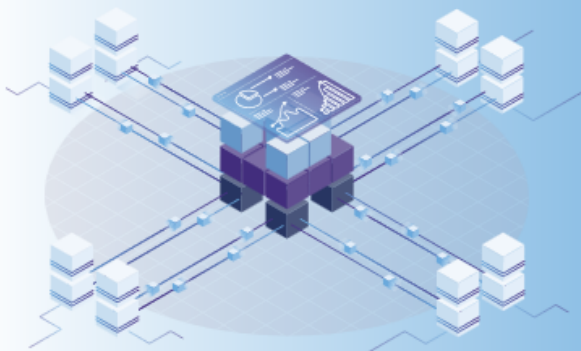

A PROPRIETARY STREAMING DATABASE AND TRANSACTIONAL ENGINE

A CUSTOM WEB STACK THAT CAN HANDLE HIGH PERFORMANCE LOADS

SPECIALIZED FULL-STACK ADAPTIONS OF "LOW CODE" ACCELERATORS

VELOX FINANCIAL TECHNOLOGY

Velox enables software development teams to build new or modernize existing enterprise systems up to 10x faster.

The Velox full-stack application development platform (vCore) provides professional developers with tools that amplify their expertise in Java and Web programming, allowing them to focus on building differentiating business functionality.
